ONLINE STAGE 1 5/15^{WED} - 6/5^{WED}

Introduction

The 31th JSASE Automotive Engineering Exposition 2024 YOKOHAMA took place for three days

From Wednesday, May 22 to Friday, May 24, 2024.

This year, 590 companies exhibited in 1,378 booths,

We were pleased to have 75,972 visitors over the three-day period.

This report describes the results of the exposition based on the answers to questionnaires
by visitors and exhibitors.

These results will be used to make subsequent expositions even more successful.

Thank you for supporting the Automotive Engineering Exposition,
and we look forward to your continued support in the future.

SUMMARY REPORT

Exhibition Name	AUTOMOTIVE ENGINEERING EXPOSITION 2024 YOKOHAMA
Dates	Wednesday, May 22, through Friday, May 24, 2024 Wednesday & Thursday 10:00 - 18:00 Friday 09:00 - 16:00
Venue	PACIFICO Yokohama Exhibiton Hall / NORTH
Organizer	Society of Automotive Engineers of Japan, Inc. (JSOE)
Under the Auspice of	Yokohama city
Supported by	Automobile Business Association of Japan / Flat Glass Manufacturers Association of Japan / Information Processing Society of Japan / Japan Aluminium Association / Japan Auto-Body Industries Association Inc. / Japan Auto Parts Industries Association / Japan Automobile Manufacturers Association, Inc. / Japan Automobile Research Institute / Japan Automobile Transport Technology Association / Japan Automotive Machinery and Tool Manufacturers Association / Japan Automotive Service Equipment Association / Japan Automotive Software Platform and Architecture / Japan Internal Combustion Engine Federation / Japan Lubricating Oil Societies / Petroleum Association of Japan / The Institute of Electrical Engineers of Japan / The Iron and Steel Institute of Japan / The Japan Automobile Tyre Manufacturers Association, Inc. / The Japan Federation of Engineering Societies / The Japan Institute of Light Metals / The Japan Magnesium Association / The Japan Petroleum Institute / The Japanese Society for Artificial Intelligence /The Japan Society of Mechanical Engineers / The Society of Instrument and Control Engineers / The Society of Materials Science, Japan
Attendees	Attendees consist of engineers, researchers, from the automobile, electronic,test & measurement equipment, information & software, logistics & transportation industries as well as educational & research institutes.

Questionnaire Results

3,017 people answered the survey.

Likelihood of attending the next exposition

Positive comments were received from many visitors.

VISITORS' VOICE

In 2024, the addition of the North hall to complement the exhibition hall expanded the scale of the exposition and made a big impression. Up until last year, the press of people at the exposition made it difficult to have unhurried conversations. However, this year, despite the large number of visitors, it was possible to talk more easily to the exhibitor representatives in the booths. I look forward to coming next year as well.

This year, the Annual Spring Congress also made use of the North hall, which made it easier to come and go as a participant. As it was difficult to take part in the Annual Spring Congress while seeing everything at the exposition in a single day, I think I will have to split my visit over two days next year.

This year's exposition, I was extremely interested in AI technologies. I used the online exposition to identify booths exhibiting AI-related technologies before visiting them onsite. Despite the large number of visitors and the fact I couldn't get to every booth I wanted, I learned a lot about AI. I look forward to coming next year as well.

Exhibition Categories of Interest

Status of utilization regarding online exhibitions

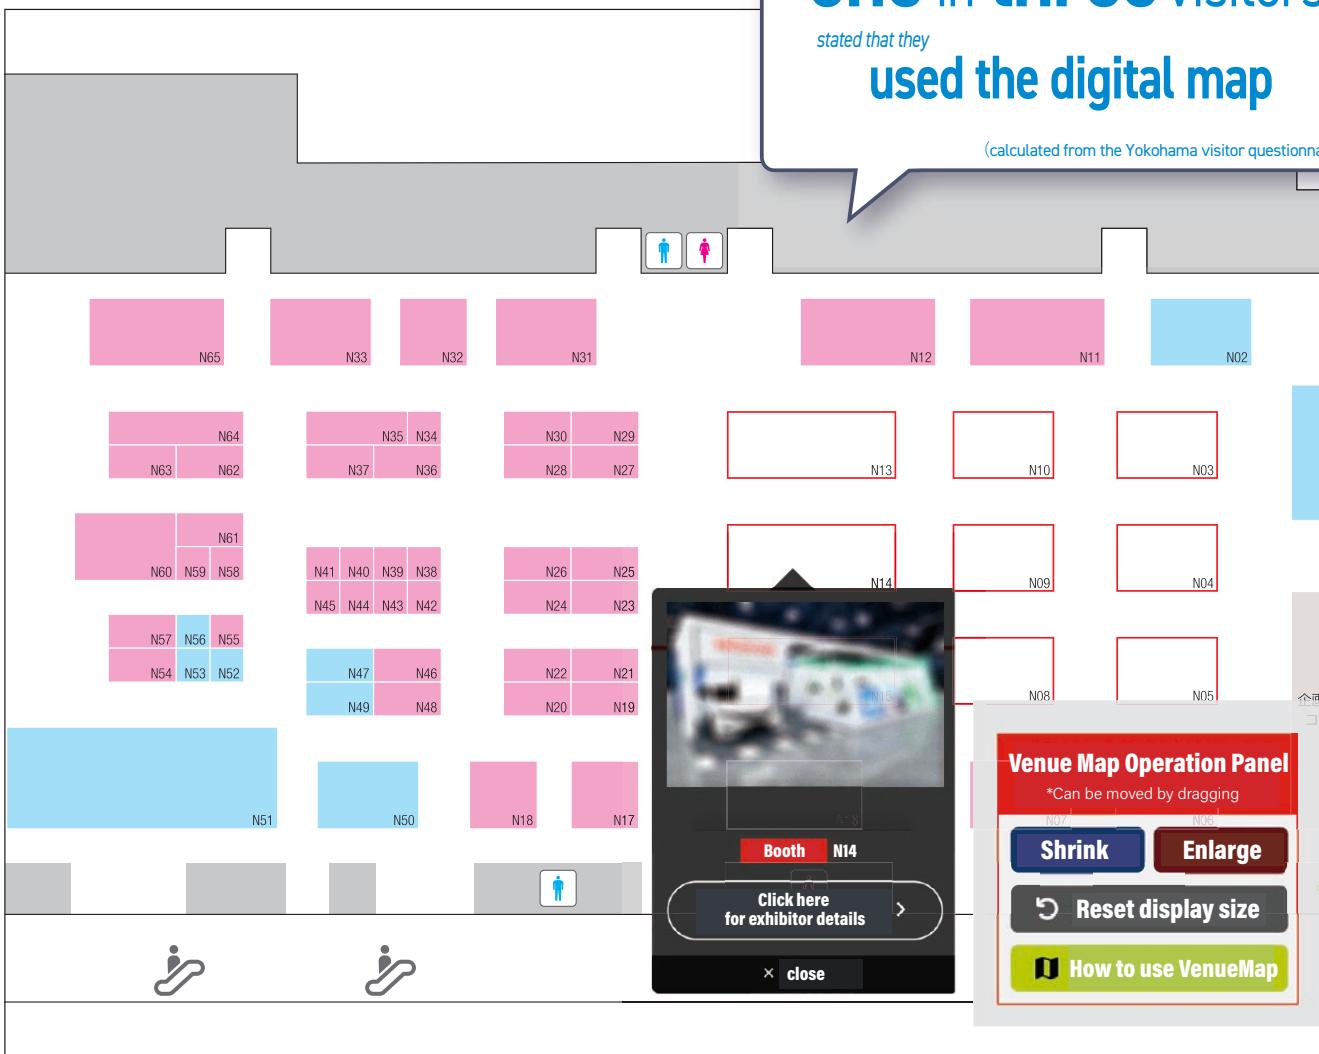

Visitors to the Yokohama exhibition used online exhibits for preliminary research before attending and for follow-up checks after attending.

User's Review

Visitor comments using online exhibition and digital map

- User 1:** I felt that there was more information disclosed than last year. This year, I confirmed the exhibition contents in advance online and used the actual exposition to talk with the exhibitors. I hope that more companies will enhance their online content in the future.
- User 2:** I'm glad that I grasped the outline of the exposition to some extent before coming. I was able to prepare what I wanted to ask before reaching the venue and make efficient use of my time. I intend to do the same before coming next year as well.
- User 3:** The digital map registration method was easy to understand. It was useful to have an efficient route to all my target exhibits that I could study in advance. Companies that introduced the details of their exhibits in the online exposition were easy to select as candidates for an in-person visit.
- User 4:** The function to add items to the visit list was convenient. The tool made it easy to create a list of interesting companies. Being able to make and create a list of visit notes at the venue helped me prepare and create my report faster because I could paste these notes straight into Excel.
- User 5:** I used a digital map to navigate the exhibition hall. Additionally, since some exhibits couldn't be fully viewed in detail on-site, it was great to be able to check the missed information online later.
- User 6:** I used the online exposition to see if I had missed any exhibits when I visited the venue. In addition, it was very useful to be able to make notes about my conversations with people in the booth that could be pasted straight into my company report.

Status of Utilization: Digital Map

A large proportion of visitors used this function.

**Percentage of pinned exhibition booths:**

95.2%
of total

(total exhibitor accounts: 611 companies)

Average number of pinned booths:

267 pins
per exhibitor
10 pins
per user

**Which exhibits left the best impression in the general exhibits?****Answer Ranking**

Likelihood of exhibiting at
the next exposition

Positive comments were received from many exhibitors.

EXHIBITORS' VOICE

This year, the addition of the NORTH hall led to an increase in both exhibitors and visitors, and helped to expand the scale of the exposition. Although this had some negative impacts, such as increasing the time to go to and from the exhibition hall and congestion in the venues at peak times, our company benefitted even more from this year's exposition, including meeting new customers. It was a very satisfactory three days.

We felt that a wide range of visitors came to the exposition, from students to veteran engineers.

A large number of people from design and purchasing functions of automakers visited our booth and showed great interest in our exhibits.

Many people had visited the online exposition in advance and were already well-informed, which helped to make communication easier.

One of the attractions of the exposition is the wide range of exhibits, extending from materials from key parts, materials to testing equipment, centered on automakers. Our company handles software for development, and we were able to make contact with people in charge of prototyping and testing. Every year, we benefit from participating in the exposition. In the future, we plan to release solutions that incorporate AI, and we look forward to seeing people's reactions.

JSAE SPECIAL EXHIBITS

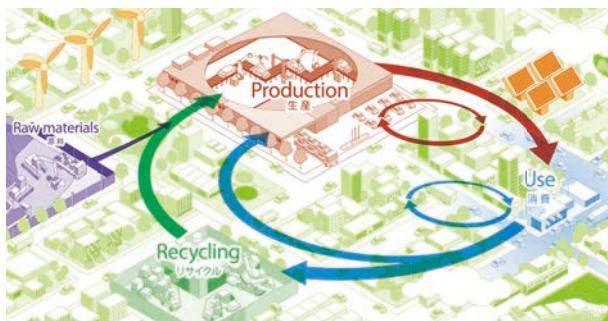

Gathering the collective wisdom of the automotive industry for carbon neutrality and the recycling-oriented society of the future.

As we face up to “The triple planetary crisis” of climate change, biodiversity loss, and pollution, we have been reminded that the planet is a finite resource. Over the past few years, Japan and many other countries and regions around the world have begun to accelerate their efforts toward achieving carbon neutrality by 2050 and realizing a sustainable economy through changing and improving the nature of society. The keys to these efforts are creative collaboration and the circular economy.

To successfully implement these efforts, we must move on from the conventional linear process of resource exploitation, manufacturing, and disposal, to a socially oriented circular system focused on the 4Rs, which supplements the well-known concept of the 3Rs (reduce, reuse, and recycle) with a fourth “R”: renewable. The realization of a socially oriented circular system is not simply a question of recycling waste. Each and every one of us must shift our value standards toward responsible manufacturing and responsible use. Progress toward decarbonization that focuses on the whole vehicle lifecycle depends on us questioning conventional wisdom, looking at things from new perspectives, and taking on the challenges involved through a process of creative collaboration with new partners.

We must ask ourselves, “What technologies will make people and the world happy?” and work to build new value chains with these partners. We hope that everyone involved in the world of cars can meet at the Automotive Engineering Exposition 2024 and showcase our collective wisdom.

Realizing a sustainable circular society through technological progress and new standards of values!

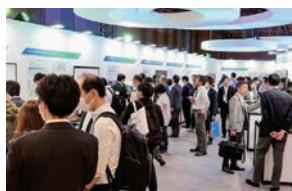

Over the past year, efforts related to automotive resource recycling have gained increasing momentum on a global basis, especially in Europe. Examples include new proposals for more stringent end-of-life vehicle (ELV) regulations affecting vehicle design and scrapped vehicle management, and the implementation of battery regulations covering the whole lifecycle from battery material procurement to the design and production processes, re-use, and recycling. In contrast, although the vehicle recycling rate in Japan is reported to be 99%, this includes thermal recycling that simply re-uses the heat generated by burning those recycled materials. As approximately 60% of plastic materials are thermally recycled, we need to reduce this rate and return more materials to circulation.

This year's Yokohama exposition puts the spotlight on material and chemical recycling technologies, focusing on plastics. Through this exposition, our goal is to create an ideal forum for the whole industry to come together and consider the nature of sustainable resources to help achieve a recycling-oriented circular society.

PRESENTATIONS

JSAE Special Presentations

Presentations were held based on the exposition theme set by the JSAE.

Wed., May 22	10:30 11:30	The circular economy in the GX era Yasuhiro Yoshikawa Deputy Director, Industrial Science and Technology Policy and Environment Bureau Resource Efficiency and Circular Economy Division, Ministry of Economy, Trade and Industry
	13:00 14:00	Resource recycling trends affecting the global automotive industry Shohei Sano Consultant, Sustainability Consulting Division 2 Mizuho Research & Technologies, Ltd.
Thu., May 23	10:30 11:30	Future ISO-centric activities toward carbon neutrality Atsushi Inaba President Japan Life Cycle Assessment Facilitation Centre
	13:00 14:00	Material recycling processes for achieving carbon neutrality Toshiaki Yoshioka Professor, Graduate School of Environmental Studies Tohoku University
Fri., May 24	10:30 11:30	Resource circulation toward realization of zero environmental impact Wataru Taga General Manager, Corporate Business Development Unit, Resource Circulation Planning Division Corporate Strategy Operations, Honda Motor Co.Ltd
	13:00 14:00	Initiatives by a part manufacturer toward realizing a circular society Masashi Kiyono Senior Director, Research & Development Center DENSO CORPORATION

Chief Engineer Presentations

Vehicle developers describe the passion and dedication they bring to carmaking.

Wed., May 22	15:30 16:30	Mazda MX-30Rotary-EV - Heritage meets electrification - Wakako Uefuji General Manager, EV Production Engineering Dept. Mazda Motor Corporation	
	15:30 16:30	Stories from the development of the redesigned Alphard and Vellfire Takahiro Sugama General Manager, ZH Product Planning, TOYOTA AUTO BODY CO.,LTD. ZH CV Product Planning, TOYOTA MOTOR CORPORATION	
Thu., May 23	15:30 16:30		
	15:30 16:30
